Intel Docket: P11158

## **AMENDMENTS TO THE CLAIMS:**

This listing of claims replaces all prior versions and listings of claims in the application:

## **LISTING OF CLAIMS:**

1. (Currently Amended) A method of generating a shadow in a virtual three-dimensional (3D) space, comprising:

adjusting a resolution of a 3D model;

projecting elements of the 3D model onto a surface in the virtual 3D space; <u>and</u> rendering a shadow having the adjusted resolution of the 3D model on the surface using the projected elements; <u>and while concurrently</u> rendering the 3D model at a resolution that is higher than the adjusted resolution.

- 2. (Original) The method of claim 1, wherein the elements of the 3D model are projected based on a location of a virtual light source in the virtual 3D space.
- 3. (Original) The method of claim 2, wherein the virtual 3D space includes a second virtual light source; and

the method further comprises:

adjusting the resolution of the 3D model to a second resolution;

Applicants: Carl S. Marshall et al.

projecting elements of the 3D model onto a second surface in the virtual 3D space based on a location of the second virtual light source; and

rendering a second shadow having the second resolution on the second surface using the elements projected on the second surface.

- 4. (Original) The method of claim 1, wherein adjusting comprises reducing the resolution of the 3D model.
- 5. (Original) The method of claim 4, wherein adjusting comprises removing elements of the 3D model.
- 6. (Original) The method of claim 5, wherein the 3D model comprises a multi-resolution model.
  - 7. (Original) The method of claim 1, further comprising: providing a user interface for use in adjusting the resolution of the 3D model.
  - 8 (Cancelled)
- 9. (Original) The method of claim 1, wherein the elements comprise vertices of the 3D model.

Applicants: Carl S. Marshall et al.

10. (Original) The method of claim 1 wherein the elements comprise polygons of the 3D

model.

11. (Currently Amended) An apparatus for generating a shadow in a virtual three-

dimensional (3D) space, comprising:

a memory that stores executable instructions; and

a processor that executes the instructions to:

adjust a resolution of a 3D model;

project elements of the 3D model onto a surface in the virtual 3D space; and

render a shadow having the adjusted resolution of the 3D model on the surface

using the projected elements; and render while concurrently rendering the 3D model at a

resolution that is higher than the adjusted resolution.

12. (Original) The apparatus of claim 11, wherein the elements of the 3D model are

projected based on a location of a virtual light source in the virtual 3D space.

13. (Original) The apparatus of claim 12, wherein the virtual 3D space includes a second

virtual light source and the processor executes instructions to:

adjust the resolution of the 3D model to a second resolution;

Applicants: Carl S. Marshall et al. Attorney's Docket No.: 10559-479001

project elements of the 3D model onto a second surface in the virtual 3D space based on

a location of the second virtual light source; and

render a second shadow having the second resolution on the second surface using the

elements projected on the second surface.

14. (Original) The apparatus of claim 11, wherein adjusting comprises reducing the

resolution of the 3D model.

15. (Original) The apparatus of claim 14, wherein adjusting comprises removing

elements of the 3D model.

16. (Original) The apparatus of claim 15, wherein the 3D model comprises a multi-

resolution model.

17. (Original) The apparatus of claim 11, wherein the processor executes instructions to

provide a user interface for use in adjusting the resolution of the 3D model.

18 (Cancelled)

19. (Original) The apparatus of claim 11, wherein the elements comprise vertices of the

3D model.

20. (Original) The apparatus of claim 11, wherein the elements comprise polygons of

the 3D model.

21. (Currently Amended) An article comprising a machine-readable medium that stores

executable instructions for selecting a target object in virtual three-dimensional (3D) space, the

instructions causing a machine to:

adjust a resolution of a 3D model;

project elements of the 3D model onto a surface in the virtual 3D space; and

render a shadow having the adjusted resolution of the 3D model on the surface using the

projected elements; and render while concurrently rendering the 3D model at a resolution that is

higher than the adjusted resolution.

22. (Original) The article of claim 21, wherein the elements of the 3D model are

projected based on a location of a virtual light source in the virtual 3D space.

23. (Original) The article of claim 22, wherein the virtual 3D space includes a second

virtual light source and the article further comprises instructions that cause the machine to:

adjust the resolution of the 3D model to a second resolution;

project elements of the 3D model onto a second surface in the virtual 3D space based on

a location of the second virtual light source; and

Applicants: Carl S. Marshall et al.

render a second shadow having the second resolution on the second surface using the elements projected on the second surface.

- 24. (Original) The article of claim 21, wherein adjusting comprises reducing the resolution of the 3D model.
- 25. (Original) The article of claim 24, wherein adjusting comprises removing elements of the 3D model.
- 26. (Original) The article of claim 25, wherein the 3D model comprises a multiresolution model.
- 27. (Original) The article of claim 21, further comprising instructions that cause the machine to provide a user interface for use in adjusting the resolution of the 3D model.
  - 28. (Cancelled)
- 29. (Original) The article of claim 21, wherein the elements comprise vertices of the 3D model.
